Bike components.

Dear customer

As your commercial and technical partner we would like to inform you about Elvedes shortly.

Elvedes: specialist since 1965

Since its establishment in 1965, family business Elvedes has developed into the definitive global specialist in cable and brake components for two-wheelers. For over fifty years, we have been applying our know-how to translate our customers' requirements into practical and efficient solutions.

Your global partner for premium quality.

Our many years of experience and knowledge of the two-wheeler-sector enable us to provide an extremely broad and comprehensive range of cable and brake components of premium quality at competitive prices. Many of our products are manufactured and checked in-house, in The Netherlands, which contributes to constant quality and fast delivery time.

Your partner for innovative solutions

Elvedes is constantly developing innovative solutions. For example, in order to increase efficiency in the workplace of bike dealers, Elvedes developed a line of easy-view displays, such as displays for cable volume boxes, parts and disc brake pads. This display concept turned out to be a great success!

Elvedes in the bike store

Beside displays and volume packaging for the workshop, we also provide consumer packaging for the bike store. Elvedes also packages its products for private labels. Anyway, Elvedes has been a reliable global partner for many years. We listen carefully to our customers, provide effective aftersales service and know exactly what you expect from us!

With kind regards,

Peter van der Spruijt
Your commercial partner

‘A real family business since 1965’

Do business with Elvedes and you do business with Carl and Peter van der Spruijt. The twin brothers took the business over from their father, Lourens, 15 years ago. Their innovative solutions have made them the market leader in the Benelux, and they’re working hard to build a strong brand in the rest of Europe too. Just like their father, they like to keep their business personal and approachable.

Family business Elvedes was founded in 1965, when Lourens van der Spruijt began trading in moped parts. It was at that time when moped handlebars were starting to get much higher, and the existing cables weren’t long enough. The demand for extra long

cables grew quickly. At the same time, there was increasing demand for bicycle cables to replace brake rods. In the early ‘70s, Lourens decided to focus entirely on moped and bicycle cables. The Elvedes brand became well known in the Benelux. In 2002, Lourens’ sons Carl and Peter took over the business. Brake pads, discs, hydraulic hoses and components were added alongside the cable range. Today, the company has 13 permanent employees, including Carl and Peter’s brother and sister. A new milestone was reached in 2016, when the company moved to new premises in Nieuwkuijk, with plenty of space for offices, the factory and warehouse.

Focus

Lourens: “I registered the company at the Chamber of Commerce on 8th February 1965 and wrote my first invoice the day after. At first, it was a tenner here and there, but the sums soon got larger. One year later, I had a healthy business and was able to pay off the start-up capital I’d borrowed. After that, the growth just continued and we were never once in the red in all those years.

A lot has changed over the past 50 years. In those early years, I’d be sitting in my parents’ kitchen with a solder pot making cables. The business is much more professional these days. When I decided it was time for me to call it a day, naturally I hoped that the boys would take over the company. They’d already been working Saturdays and holidays at the firm since being little. But I never pushed them to take it over.

Carl and Peter have expanded the business further, with greater focus on the Elvedes brand and a more extensive range. But the values of the family business - reliability and quality - have remained. The way they run the business now is just fantastic.”

Different

Carl: “Technology, innovation and quality are key drivers within Elvedes; we are working on them on a daily basis. These drivers earn you a certain brand position within the market. We focus mainly on the replacement market. The bicycle sector is constantly evolving, and we’re right behind it. For instance, we’ve started a bearings and pulley wheels initiative, which centres around the needs of the market. We’re looking at what can be improved in the existing offering and how things can be made clearer for the end user. It’s our service focus that sets us apart.

My twin brother and I each have our own areas of work: Peter is the commercial guy and sees things from a very different perspective to me, the technical one. But at the end of the day, together, we are Elvedes.

Customers like dealing with ‘the Elvedes twins’. It does have its pluses: a commercially-minded person finds it difficult to explain the technical benefits.”

We are a stock-holding partner with short delivery times throughout the whole of Europe

Challenge

Peter: “The challenge for us over the coming years is primarily in the European market. We are a well-known name in the Benelux, but in other European countries we are having to start at the bottom of the pack. In that sense, it’s crucially important to research the market in a new country properly, as each country has its own specific requirements. We feel it’s important to listen to our customers; they intercept a lot of the market discussion and we can then translate that into new or improved products. The lines of communication within Elvedes are very short, so we act fast here.

In the cable arena, Elvedes has also been active in industry for many years. Here, control cables are used to operate countless mechanical products, and the associated industry knowledge can at times be of real interest to the bicycle industry. This cross-fertilisation has definite advantages.

I feel the partnership with Carl adds value to the business. While we are identical twins, we’re totally different. We complement each other and keep each other on our toes. I think the future of Elvedes holds a growing market share in Europe, whereby we can reinforce the added value we offer as a business and as a brand by representing a stock-holding partner with short delivery times and quality products.”

Add quality and comfort to your workplace.

Transit

Item nr. 2016042

All-in-one mobile display frame.
Workshop displays compactly arranged.
No displays included.

Dimensions
97x180x41 cm

Elvedes has been contributing to the comfort of bicycle repairers for more than fifty years. Your specialist in cables and brake components develops innovative solutions for day-to-day problems in the workshop, with the successful displays for bicycle repairers as the best known solution. Our products can be organised in a compact way in these metal displays, so that bicycle repairers can find the right part quickly and easily. Ask your wholesaler for the complete Elvedes range, including the displays. Benefit from our attractive campaign: if you order a filled display now, you will receive the display free of charge.

Practical in use

Elvedes currently offers six displays for the workshop: the "Boxer" for cables, the "Partner" for cable parts, the "Caddy" for rim brake pads, the "Juke" for brake discs, the "Discovery" and "Padfinder" for disc brake pads. Each display puts the bicycle repairer's comfort first. The display for disc brake pads, for example, includes a poster with full-size images of all occurring models. When you put the worn disc brake pad onto the poster, you will immediately see the article you need to replace it with. On the basis of the article number you will quickly find the part in the display. The "Boxer" cable display also has many clever details. The packaging in the display has a handy roll-off mechanism, so you can easily unroll the cables and cut them to size. It is also

possible to attach the "Partner" display with cable parts to the "Boxer" cable display. That means you have all you need to replace cables clearly organised.

Calm and convenience

The tidy, easy-to-use displays of Elvedes introduce order, calm and efficiency to your workshop. Moreover, all the displays can be refilled: it is very easy to place repeat orders for the parts. As Elvedes has a very broad range of brake and cable systems, you will always find what you are looking for. All products have been made from high-quality materials. This means you know you get the best quality at a competitive price.

Elvedes: specialist since 1965

Since its foundation in 1965, our family business has developed into the best-known European specialist in cable and brake systems for bikes. In the Benelux (Belgium, Netherlands and Luxembourg) alone, as many as 2500 bicycle dealers have one or more Elvedes displays in their workshop. The most important reason for our success? For fifty years, Elvedes has been listening to what bicycle repairers want and has been responding with practical, efficient solutions for the workshop. We always aim to meet your needs!

In order to increase efficiency in the workshop, Elvedes has developed a compact all-in-one mobile frame. This facilitates you to quickly and easily find all components you need for replacing cables and brake parts.

The Transit can be equipped with:

- 1. Caddy - page 31**
Rim brake shoes 2016041
- 2. Discovery - page 30**

Cable systems.

Quality

Our high quality cable systems are produced and packed in-house. Our technical team comes up with innovative solutions, which are further developed and eventually produced. Furthermore, the quality of our cable systems is being monitored on a daily basis.

Aftermarket

A large number of our cable systems are packed under the Elvedes brand. Packaging can be divided in consumer packaging and workshop packaging. For both target groups we offer a complete product range. We also supply a number of practical tools, like the Elvedes cable pricker.

OEM

Besides from packaged products, we have been delivering cables to bicycle manufacturers for over 50 year. Through years of experience with the production of cable systems and maintaining a high level of stocks, we can advise you properly and deliver the most suitable product with the shortest delivery time.

Cable pricker.

Sharpened spoke

How does a bike mechanic open the liner of his outercasing after cutting it? This question caught our attention and we started our investigation. It turned out that many mechanics used a sharpened spoke to pierce the liner of the outercasing after cutting it.

Innovation

As there was no professional solution on the market, we started making some sketches of what a cable pricker should look like. We even added an extra function. After cutting, the outercasing will have been flattened, which makes it difficult to assemble the ferrule. In our design the outercasing will be returned to its original shape, so we solve two problems simultaneously.

An essential tool

Outercasing for bicycles are available in two dimensions, Ø4,1mm and Ø4,9mm. We designed the cable pricker with two entries for both dimensions. The Elvedes cable pricker is essential in each workshop, because it's quick, easy and effective.

ATB / Race cable kits.

Single pack

All cable kits fit:

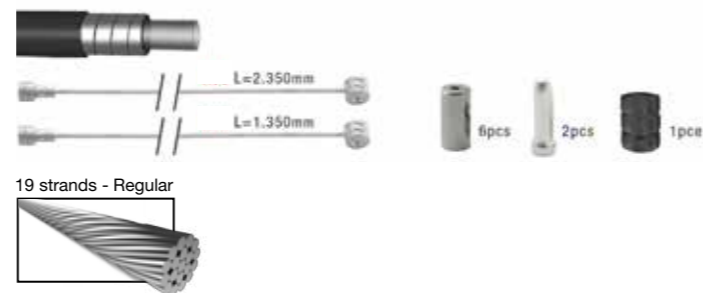

Shimano
Campagnolo
SRAM

Testing

By offering a complete range of rim brake pads, disc brake pads and disc brake rotors, we try to maintain a lead role in the business. In order to get a clear picture of the performances of our products, all brake systems are being tested under all circumstances by a team of professional riders.

Ingredients

When we are not satisfied with the performance of our products after testing them, we improve them. For example we enhanced the compound of a disc brake pad which wears out too quickly in muddy conditions. By adding or removing ingredients we are able to improve the quality.

Details

Products often consist of a composition and in a composition not everything wears out over the same amount of time.

Besides our complete range of disc brake pads, we also offer separate springs, clips, locking pins and much more. These small accessories are just details, but details make the difference.

Compounds

Compounds are made of different ingredients. Every compound has its pros and cons. We are bringing up three compounds which offer a powerful braking performance for every bike and every weather condition.

Organic (resin)

-Dry conditions
-MTB/trekking bike/racing bike

Sintered (metal)

-Wet, muddy conditions
-MTB

Metallic carbon (semi-metal)

-Dry and wet conditions
-E-bike

Lifespan

After assembling, bedding-in your new set of disc brake pads is very important and will expand the lifespan of the pads significantly.

Bedding-in

How to extend the lifespan of your disc brake pads:

Bedding-in brake pads extend the lifespan of the pads significantly! Gently squeeze the brake lever while riding and ensure that the pads just audibly touch the brake rotors. Ride for approximately 100 metres at a speed of ±25km/h and then squeeze a little harder to decrease the speed to approximately 5km/h. Then slowly increase the speed again while gently squeezing the brakes and repeat ten to twelve times to ensure the pads are well worn in.

Disc brake pads.

Order quantity

XXXX -CARD

All disc brake pads can be ordered per card, containing 1 pair.

XXXX -BOX

Select disc brake pads can be ordered per box, containing 10 pair.

All organic, sintered and metallic carbon disc brake pads have a steal backplate.

Aerostream.

Cooling technology

For extra cooling of the brake system, we developed the Aerostream disc brake pads.

By using the reusable cooling fins on the backplate of the disc brake pad, the airflow will be directed into the brake system. When going down a long or steep hill the cooling technology of Aerostream will cool the extra generated heat even better.

The brake pads, rotors and brake hose will burn less quickly and therefore extend the lifespan.

Additional to a complete set of brake pads with standard black cooling fins, we also offer replacement pads and separate cooling fins in four colours.

Aerostream disc pads.

Aerostream disc brake pads

6894CPF

Aluminum backplate.
With reusable black cooling fins.
Fits Shimano BR-M666, M785, M985, M988, R785, RS785

Metallic carbon (semi-metal)
-Dry and wet conditions

Aerostream replacement pads

6894CP

Aluminum backplate.
Replacement brake pads for 6800CF cooling fins.
Fits Shimano BR-M666, M785, M985, M988, R785, RS785

White compound.

Prevents squeaking brakes

There was an increasing demand for powerful rim brake pads which do not squeak during wet or cold weather. This motivated us to develop the "white compound".

Since this compound is, among others, a little softer than most regular compounds, it prevents vibration which usually results in squeaking brakes. Furthermore, this slightly softer compound provides you a well controlled, powerful braking performance.

Finally, the white compound does not shed brake dust, often found on rims, frames and clothes.

In the meantime, we have added a complete range of "white compound" rim brake pads to our product range.

Rim brake pads.

Order quantity

XXXX -CARD

All rim brake pads can be ordered per card, containing 1 pair.

XXXX -BOX

Select rim brake pads can be ordered per box, containing 25 pairs.

Hydro systems.

Original

An increasing number of bicycles are fitted with hydraulic brake systems of different brands. Each brand has its own specification for the brake hose and matching components. When shortening or repairing the original brake hose, finding the right part is difficult. We offer a complete and always up-to-date range of components for all different conventional brands.

Upgrade

Also we have a complete range of coloured brake hose and all matching components. Our brakehoses are fitted with PTFE to resist high temperatures and are kevlar reinforced. All components are manufactured in stainless steel to protect them against corrosion. These high quality materials are an upgrade compared to the original brands.

Tools

Finally, Besides from separate brake hoses and components, we also offer the necessary tools and brake oils to guarantee an easy and quick assembly.

Hydro tools.

Bleeding kit

2012095

For mineral and DOT oil. Including all adapters for Shimano, Magura, Hayes, Avid / Sram, Formula and Tektro.

End press

2017159

End press to press your needles fast and easily into the hydraulic hose.

Hose cutter

2010036

For smooth and burr-free cutted hydraulic hose. Prevents leakage and damage of the hydraulic hose.

Open ring wrench 7/8

2017056

For easy access to the lever and caliper bolt.

Hydro components.

Hydraulic hose fitting box

2015145

With this box, any original hose of Tektro, Magura, Shimano, Avid, Hayes and Formula can be shortend. This box contains sufficient parts to shorten 10 hoses per brand, 60 hoses in total. Refill of 10 pcs. available for all parts.
